Packaged Heat Pumps

Owner’s Guide to Operating and Maintaining Your Heat Pump

**WARNING**

**ELECTRICAL SHOCK HAZARD.**

Failure to follow this warning could result in personal injury, death, and/or property damage.

Disconnect power at fuse box or service panel before performing recommended maintenance.

**WARNING**

**FIRE OR EXPLOSION HAZARD**

Failure to follow safety warnings exactly could result in personal injury, death, and/or property damage.

Information in this manual MUST be followed exactly.

Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

**WARNING**

**FIRE, EXPLOSION, ELECTRICAL SHOCK HAZARD.**

Failure to follow this warning could result in personal injury, death, and/or property damage.

Do not use this unit if any part has been under water. Immediately call a qualified service technician to inspect the unit and to replace any part of the control system which has been under water.

This manual should be left with the owner.
SAFETY CONSIDERATIONS

Installation and servicing of this equipment can be hazardous due to mechanical and electrical components. Only trained and qualified personnel should install, repair, or service this equipment.

Untrained personnel can perform basic maintenance functions such as cleaning and replacing air filters. All other operations must be performed by trained service personnel. When working on this equipment, observe precautions in the literature, on tags, and on labels attached to or shipped with the unit and other safety precautions that may apply.

Follow all safety codes. Installation must be in compliance with local and national building codes. Wear safety glasses, protective clothing, and work gloves. Have fire extinguisher available. Read these instructions thoroughly and follow all warnings or cautions included in literature and attached to the unit.

Recognize safety information. This is the safety-alert symbol When you see this symbol on the unit and in instructions or manuals, be alert to the potential for personal injury.

Understand these signal words: DANGER, WARNING, and CAUTION. These words are used with the safety-alert symbol. DANGER identifies the most serious hazards which will result in severe personal injury or death. WARNING signifies hazards which could result in personal injury or death. CAUTION is used to identify unsafe practices which may result in minor personal injury or product and property damage. NOTE is used to highlight suggestions which will result in enhanced installation, reliability, or operation.

Note: Installer: This manual should be left with the equipment user.

WELCOME TO EFFICIENT YEAR-ROUND COMFORT

Your new heat pump represents both the latest in engineering development and the culmination of many years of experience from one of the most reputable manufacturers of comfort systems.

Your new unit is among the most energy-efficient and reliable heat pump products available today. To assure its dependability, spend just a few minutes with this booklet now to learn about the operation of your heat pump, and the small amount of maintenance it takes to keep it operating at its peak efficiency. With minimal care, your new heat pump will provide you and your family with year-round home comfort, both now and for years to come.

IDENTIFYING YOUR SYSTEM

Take the time to familiarize yourself with your packaged heat pump type of system. This knowledge will be of use in understanding the basic operation of your new heat pump. The unit has a rating plate affixed to it which provides necessary information for specific identification of a unit. You should familiarize yourself with the product, model, and serial numbers listed on each rating plate. Record them for future reference in the space provided at the end of this booklet.

ELECTRICAL SHOCK AND CUT HAZARD

Failure to follow this warning could result in personal injury, death or property damage.

When removing access panels or performing maintenance functions inside your unit, be aware of sharp sheet metal parts and screws. Although special care is taken to reduce sharp edges to a minimum, be extremely careful when handling parts or reaching into the unit.

IMPORTANT FACTS

To better protect your investment and to eliminate unnecessary calls, familiarize yourself with the following facts:

1. Your heat pump system should never be operated without a clean air filter properly installed. Plan to inspect the filter periodically. A clogged air filter will increase operating costs and shorten the life of the unit.

2. Supply-air and return-air registers should not be blocked. Drapes, furniture, and toys are some of the items commonly found obstructing registers. Restricted airflow lessens the unit’s efficiency and life span.

3. The outdoor unit must have unrestricted airflow. Do not cover the unit, lean anything against it, or stand on it. Do not allow grass clippings, leaves, or other debris to accumulate around on top of the unit. Maintain a 12” (305mm) minimum clearance between the outdoor unit and tall grass, vines, shrubs, etc.

4. Your multipurpose indoor thermostat is the control center for your heat pump system. You should familiarize yourself with its proper operation. Attempting to control the system by other means, for instance, switching the electrical supply power ON and OFF, may cause damage to the unit (See Fig. 3).

5. During heating, increasing the thermostat setting more than 2 degrees may cause the supplemental heaters to be turned on for a short period of time to satisfy the thermostat. Needless use of the supplementary heat reduces potential energy savings.

6. You may find that you can maintain greater personal comfort by running the fan continuously. “Air pockets” can form due to the structure of the house, placement of
registers, etc. Air pockets may be too cool or warm for your liking. Continuous fan operation minimizes any temperature differences. Also, systems equipped with electronic or mechanical air cleaners and/or humidifiers offer the added benefits of having the air continuously cleaned year-round and humidified during the winter season.

7. A system equipped with a heat or energy recovery ventilator offers the advantage of exhausting stale air from the home and allowing fresh air in from the outdoors while minimizing heat loss.

8. Your system may also be equipped with a zoning system which allows individual control over the temperatures of separate areas of your home.

9. Your heat pump will remove humidity from your home during the cooling season. After a few minutes of operation, you should be able to see water trickle from the condensate drain. Check this occasionally to be sure the drain system is not clogged. Of course, don’t expect to see much drainage if you live in a very dry environment.

10. During the heating cycle, air from your registers may seem cooler than you might first expect. This is because your heat pump delivers a constant flow of air at around 90 °F (32.2 °C) to 105 °F (40.5 °C) instead of sudden bursts of hot air as with a conventional furnace. This air may feel cooler because it is slightly less than your skin temperature. However, it is sufficiently warm to keep you comfortable.

11. Ice or frost will tend to form on the coil during the winter heating operation. Your heat pump is designed to automatically melt the ice. When in this defrost cycle, it is normal for steam or fog to rise from the outdoor unit. Do not be alarmed!

12. Do not operate your unit in cooling mode when outdoor temperatures are below 55 °F (12.7 °C) unless your unit was modified for low-ambient operation.

13. Do not operate your unit in heating mode when outdoor temperatures are above 66 °F (18.9 °C) unless you set your thermostat to emergency heat mode.

**WARNING**

**ELECTRICAL SHOCK AND CUT HAZARD**
Failure to follow this warning could result in personal injury, death or property damage.

Read and follow all instructions and warnings, including labels shipped with or attached to unit before operating your new heat pump.

**OPERATING YOUR HEAT PUMP**

The operation of your heat pump system is controlled by the indoor thermostat. You simply adjust the thermostat and it maintains the indoor temperature at the level you select. Most thermostats for heat pump systems have 3 controls: a temperature control selector, a FAN control, and a SYSTEM or MODE control.

**COOLING MODE**

When operating in cooling mode, your heat pump will run in cooling mode until the indoor temperature is lowered to the level you have selected. On extremely hot days, your heat pump will run for longer periods at a time and have shorter “off” periods than on moderate days.

The following are typical conditions that add extra heat and/or humidity to your home. Your heat pump will work longer to keep your home comfortable under these conditions:

1. Entrance doors are frequently opened and closed.
2. Laundry appliances are being operated.
3. A shower is running.
4. More than the usual number of people are present in the home.
5. More than the normal number of electric lights are in use.
6. Drapes are open on the sunny side of the home.

**HEATING MODE**

With the SYSTEM or MODE control of your indoor thermostat set to HEAT, your heat pump will run in heating mode until room temperature is raised to the level you have selected. Of course, your heat pump will have to operate for longer periods to maintain a comfortable environment on cooler days and nights than on moderate ones.

**SUPPLEMENTAL HEAT**

Your heat pump is your primary heating source. Your system may also be equipped with a supplemental heating source such as electric heat. On cold days and nights, your system will automatically turn on the supplemental heat in order to maintain the level of comfort you have selected.

When your heat pump needs additional heat to keep you comfortable, your electronic thermostat will turn on the supplemental heat (if equipped) and will display the "AUX HT" message.

**DEFROST MODE**

When your heat pump is providing heat to your home and the outdoor temperature drops below 45 °F (7.2 °C), moisture may begin to freeze on the surface of the coil. If allowed to build up, this ice would impede airflow across the coil and reduce the amount of heat absorbed from the outside air. So, to maintain energy-efficient operation, your heat pump has an automatic defrost mode. The defrost mode starts at a preset time interval of 90 minutes, although, it may be reset to either 30 or 50 minutes. Defrost
will start at the preset time only if the ice is sufficient to interfere with normal heating operation. After the ice is melted from the coil, or after a maximum of 10 minutes in defrost mode, the unit automatically switches back to normal heating operation.

Do not be alarmed if steam or fog appears at the outdoor unit during defrost mode. Water vapor from the melting ice may condense into a mist in the cold outside air. During certain weather conditions such as heavy snow and freezing rain it is not uncommon for ice to build up on the unit grille. This is normal for these weather conditions. Do not attempt to remove the ice from the unit grille. This condition will not affect the proper function of the unit and will clear a few days.

**EMERGENCY HEAT MODE**

This allows your supplemental heating source to keep your home or office warm until your heat pump can be serviced. Also, if the electricity to your heat pump has been off for more than 30 minutes, switch your thermostat to EMERGENCY HEAT mode before restarting your heat pump. Leave the system in EMERGENCY HEAT mode for an amount of time equal to the power outage. It is not necessary to exceed 12 hours. (If you cannot determine how long the power has been off, leave the system in EMERGENCY HEAT mode for 8 hours.)

**PERFORMING ROUTINE MAINTENANCE**

With the proper maintenance and care, your heat pump will operate economically and dependably. Maintenance can be accomplished easily by referring to the following directions. However, before performing maintenance, consider these important safety precautions:

![FIGURE 3 Main Electrical Disconnect](image)

<table>
<thead>

</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Main Disconnect" /></td>
<td></td>
</tr>
</tbody>
</table>

**WARNING**

**ELECTRICAL SHOCK HAZARD**

Failure to follow this warning could result in personal injury, death or property damage.

Disconnect all electrical power to the indoor air handler or furnace before removing access panels to perform any maintenance. Disconnect power to both the indoor and outdoor units. Note: There may be more than 1 electrical disconnect switch.

**CAUTION**

**HAZARD**

Failure to follow this caution could result in personal injury.

When removing access panels or performing maintenance functions inside your unit, be aware of sharp sheet metal parts and screws. Although special care is taken to reduce sharp edges to a minimum, be extremely careful when handling parts or reaching into the unit.

**CHECK THE AIR FILTER**

A dirty air filter will cause excessive strain on the compressor and blower motor. This can cause the components to overheat and automatically shut down. In the worst case, the components will fail and need to be replaced. To avoid inefficient or failed operation of your unit, CHECK THE FILTER(S) EVERY 3 MONTHS. Replace filter(s) when necessary, or clean the filter(s) if you have the reusable type.

Disposable filters should be replaced by similar, new filters of the same dimensions.

Reusable, permanent filters should be washed in a solution of cold water and mild detergent, then rinsed and thoroughly dried. THE FILTER MUST BE COMPLETELY DRY BEFORE BEING REINSTALLED. To avoid prolonged shutdown of your unit while a filter is drying, you should have an extra filter on hand. This allows you to rotate between the two with minimal downtime for your comfort system. Extra filters may be purchased from your dealer.

**Table 1—Indoor Air Filter Data**

<td>24x36x1 (610x914x25 mm)</td>
</tr>
</tbody>
</table>

The filters(s) and filter rack for a packaged system are supplied and installed by the contractor or dealer. Typically, the filter(s) and rack are located in the return-air duct at the outdoor unit or behind the return-air grille(s). Have your dealer show you the location of your filter(s) and the procedures for removal and replacement.

If your system includes a high efficiency or electronic air cleaner, refer to air cleaner User’s Manual for proper filter cleaning or replacement.
OUTDOOR COIL

If grass clippings, leaves, shrubbery, and debris are kept away from the unit, minimal care should be sufficient to keep the system functioning properly. However, if the outdoor coil becomes dirty, use a vacuum cleaner or shop vac with soft brush attachment to clean the exterior surface. Vacuum coil surface using an up and down motion. Be careful not to bend or damage fins.

If dirt is deep in the coil, contact your dealer for service. Do not attempt this yourself.

OUTDOOR COIL - SEA COAST

If your unit is located near the ocean, special maintenance is required. Ocean mist/breeze carries salt, which is corrosive to most metals. Although your new unit is made out of galvanized metal and is protected by top-grade paint, you should take the precaution of additional maintenance which consists of periodically washing the unit. By washing all exposed surfaces and coil, you will be adding additional life to your unit. Please consult your installing contractor for proper intervals/procedures for your geographic area or service contact.

UNIT SUPPORT

Your packaged heat pump unit should be maintained at a level position. If its support should shift or settle so that the unit is no longer level, you should correct the condition. Re-level it promptly to assure water drains out of the unit. If you notice that water or ice collects beneath the unit, arrange for it to be drained away from the unit.

BEFORE YOUR REQUEST A “SERVICE CALL” CHECK FOR THESE EASILY SOLVED PROBLEMS:

1. Check the indoor and outdoor disconnect switches. Verify that circuit breakers are ON or that fuses have not blown.
2. Check for sufficient airflow. Check the air filter(s) for any accumulations of dirt. Check for blocked return-air or supply air registers. Be sure registers are open and unobstructed.
3. Check the settings on your indoor thermostat. If you desire cooling, make sure that the temperature control selector is set below room temperature and the SYSTEM or MODE control is set to COOL or AUTO. If you require warmth, make sure that the temperature control selector is set above room temperature and the SYSTEM or MODE control is set to HEAT or AUTO. The FAN control should be set to ON for continuous blower operation or AUTO if you wish blower to function only while your heat pump is operating. If your comfort system still fails to operate, turn your system off and contact your servicing dealer for troubleshooting and repairs. Specify your apparent problem, and state the model and serial number of your equipment. (You should have them recorded on the last page of this booklet.) With this information, your dealer may be able to offer helpful suggestions over the phone or save valuable time through knowledgeable preparation for the service call.

REGULAR DEALER MAINTENANCE

In addition to the routine maintenance that you perform, your home comfort system should be inspected regularly by a properly trained service technician. The inspection (preferably twice each year, but at least once every year) should include the following:

1. Routine inspection of air filter(s). Replacement or cleaning as required.
2. Inspection and cleaning of the blower wheel, housing, and motor as required.
3. Inspection and, if required, cleaning of coils.
4. A check of all electrical wiring and connections.
5. A check for secure physical connections of individual components within unit.
6. Operational check of the heat pump system to determine actual working condition. Necessary repair and/or adjustment should be performed at this time.
7. Your servicing dealer may offer an economical service contract that covers seasonal inspections. Ask for further details.

WARRANTIES

Your heat pump has a limited warranty. Be sure to read the warranty included with this booklet carefully to determine the coverage for your unit.

FOR THE RECORD

Record the model, product, and serial numbers of your new equipment in the spaces provided. This information, along with the other ready-reference facts requested will be necessary should you ever require information or service.

In Case of Trouble

If you perform the steps above and unit performance is still unsatisfactory, shut off the unit and call your dealer.
