DISCONNECT POWER TO THE HEATER - AIR CONDITIONER BEFORE REMOVING THE OLD THERMOSTAT AND INSTALLING THE NEW THERMOSTAT.

WARNING
INSTALLATION INSTRUCTIONS
P/N  TSTAT0711

The 2 Alkaline “AA” batteries must be replaced at least every 12 months to assure proper operation. The thermostat will display the Low Battery code (fig. 1) on the display of the thermostat when it is time to replace the batteries.

When \( \text{Lb} \) is displayed the batteries must be replaced immediately. The manufacturer cannot be liable for improper operation of the thermostat if the batteries are not immediately replaced.

The annual battery replacement is especially critical in locations subject to freezing temperatures. The thermostat will be unable to turn on the Heat if the batteries are exhausted.

This device complies with Part 15 of the FCC rules.
Operation is subject to the following 2 conditions:
(1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

2. If the Up or Down arrow buttons are pressed the thermostat will show the desired Set Temp temperature indicator. Once this screen is reached you may use the Up or Down arrow buttons to adjust the desired room temperature.

3. After five seconds with no button presses the thermostat will revert back to show the current room temperature.
Normal Operation

Thermostat Operation

1. Select Heat or Cool with the mode switch.
2. Normally leave the fan switched to Fan Auto. In Fan Auto, the fan will turn on only with a heat or cool demand. When Fan On is selected, the fan will run continuously, even when the mode switch is set to Off.
3. Adjust the desired set temperature with the Up or Down buttons.
INSTALLATION INSTRUCTIONS

Step #1  Preparation

Proper installation of the thermostat will be accomplished by following these step by step instructions. If you are unsure about any of these steps, call a qualified technician for assistance.

These tools will be required:

- Flat Blade Screwdriver
- Wire cutter & Stripper

Make sure your Heater/Air Conditioner is working properly before beginning installation of the thermostat.

Carefully unpack the thermostat. Save the screws and instructions.

Turn off the power to the Heating/Air Conditioning system at the main fuse panel. Most residential systems have a separate breaker for disconnecting power to the furnace.
INSTALLATION INSTRUCTIONS

Step #2  Remove & Replace Old Thermostat

1. Remove the cover of the old thermostat. If it does not come off easily check for screws.

2. Loosen the screws holding the thermostat base or subbase to the wall, and lift away.

3. Disconnect the wires from the old thermostat. Tape the ends of the wires as you disconnect them, and mark them with the letter of the terminal for easy reconnection to the new thermostat.

4. Keep the old thermostat for reference purposes, until your new thermostat is functioning properly.
Step #3  Installation / Battery Replacement

Open The New Thermostat

1. The top of the thermostat housing has two (2) screwdriver slots to assist when separating.

2. To pull the housing apart, insert a small blade screwdriver into the slot and rotate 90°. This will release the top housing snaps.

3. Repeat the procedure in the other screw driver slot.

4. Separate the housing halves by pulling the top forward until the pins release, and then lift the bottom out.

The batteries must be replaced immediately when the thermostat displays the Low Battery code (fig.1).
5 REPLACE WITH ALKALINE BATTERIES AT LEAST ONCE EVERY YEAR, OR WHEN THE “LOW BATTERY” icon appears (pages 3,9).

POSITION BATTERIES AS SHOWN

USE “AA” SIZE ALKALINE BATTERIES
Step #4  Wire Connections

If the terminal designations on your old thermostat do not match those on the new thermostat, refer to the chart below, or the wiring diagrams that follow.

Thermal Insulating Sheet

A label is provided on the backplate that prevents drafts, originating inside the wall, from entering the thermostat. These drafts, left unchecked, may cause incorrect room temperature readings. Please do not remove this label from the thermostat. Insert the wires through the slots provided in the label as shown in Fig. 1.

Step #5  Jumper Configuration

If the HVAC unit has First Stage Electric Heat then jumper 1 should be set to ON. If the jumper is set for Fan w/ Heat On, the fan will energize immediately on a call for heating. For all other applications this jumper should remain set to the OFF position.

If the HVAC unit is a Heat Pump, then jumper 2 should be set to ON. For all other applications this jumper should remain set to the OFF position.

REPLACE WITH ALKALINE BATTERIES ONCE EVERY YEAR
USE "AA" SIZE ALKALINE BATTERIES

Step #6  Test Operation

Turn on the power to the Heating/Air Conditioning system.

Adjust the Slide Switch until it is located under the word **HEAT** on the thermostat. Press the Up or Down buttons until the set temperature is 10 degrees above room temperature. The HVAC unit should energize in the heating mode (pages 5-6).

Adjust the Slide Switch until it is located under the word **COOL** on the thermostat. Press the Up or Down buttons until the set temperature is 10 degrees below room temperature. The HVAC unit should energize in the cooling mode (pages 5-6).

Adjust the Slide Switch until it is located under the word **OFF**. Adjust the other slide switch until it is located under the word **Fan On**. The fan should turn on and run continuously (pages 5-6).
Trouble Shooting

SYMPTOM: The slide switches on the thermostat are very difficult to move.
CAUSE: The backplate of the thermostat is deformed by being screwed tightly into a wall that is not perfectly flat.
REMEDY: Loosen the screws holding the thermostat into the wall.

SYMPTOM: The air conditioning does not attempt to turn on.
CAUSE: The cooling setpoint is set too high or the Mode Switch is not set for Cool, or the batteries are too weak.
REMEDY: Consult the Normal Operation section of this manual to lower the cooling setpoint and to correct the Mode Switch position, or replace the batteries (page 10).
SYMPTOM: The heating does not attempt to turn on.

CAUSE: The heating setpoint is set too low or the Mode Switch is not set for Heat, or the batteries are too weak.

REMEDY: Consult the Normal Operation section in this manual to raise the heating setpoint and to correct the Mode Switch position (page 10), or replace the batteries.
